Lowside drivers for 4 injectors
No flyback diode as we need rapid demagnetization
Lowside drivers for various relays / solenoids
Flyback diode used
ACT is ac condenser thermistor (ntc), input to ecu
AC1 is 12v signal from ac computer to ecu, telling it ac has been switched on (for idle up)
2 is signal from ecu to ac computer, telling it to engage clutch (allow ecu to disengage e.g full throttle)
THG is gas temp sensor for the egr passage
EGR is solenoid to enable egr
